

FEATURES AND BENEFITS

Available in one and three compartments, Earth Plus hinged containers are microwaveable and heat lamp safe, and are made from mineral-filled polypropylene that resists grease and moisture and keeps hot foods hot and cold foods cold.

With a natural look and feel, these containers are made with material consisting of up to 40% natural mineral content, which results in roughly 50% less plastic than standard containers, better for the environment and ideal for areas with foam bans.

A “four corner” lock features an audible click to indicate full closure, preventing accidental openings and spills. A perimeter seal and soak proof material also provide leak resistance, providing extra security during transport.

Perfect for leftovers, to-go, delivery and drive-thru applications, these containers feature a ribbed design for superb strength when stacking in delivery bags, along with optional vents that let steam out on the sides, eliminating condensation and keeping foods hot and crispy.

Meets all FDA packaging requirements for food contact.
