

# TABLETOP

# Tabletop

Our disposable tabletop category includes plates and platters, bowls, food trays, cutlery and specialty kits. Strong and durable, tabletop has an option for every occasion. Pieces are made from a variety of materials and manufacturing processes to offer a range of attributes.

**CS** = Total units per case  
**PK** = Sleeves per case  
**SZ** = Units per sleeve

**Plates:** Available in a range of sizes with compartment options to better manage portion control and add strength.

**Bowls:** Produced from various base materials each offering specific performance characteristics.

**Cutlery:** Available in a range of lengths, weights, material types, colors and packaging.

## At the Heart of Food and Service

---

Sysco consistently strives to exceed customer expectation. Beyond basic commitment, we deliver customers the foodservice products they want, when they need, and at a most competitive price — as promised. We remain mindful that we succeed if our customer is successful.

Additionally, as stewards of the Earth, it is our responsibility to protect, nurture and build upon the natural resources provided to us. We continually seek out new ways to grow, harvest and distribute food in a manner that not only preserves and protects the environment, but strengthens our ability to deliver the best possible quality to our customers. In this way, we ensure a healthy future not just for our planet, but for our businesses and end users alike.

## Supplier Partners

Sysco's suppliers remain an integral part of our success, a partnership valued to the highest degree. We strengthen that value in many ways to include: coaching growers on sustainable practices, helping small and local farms connect with chef-driven restaurants, and sharing product recommendations derived from our unique exposure and insight into the food industry.

We continually strive to become a more effective partner, increasing information capabilities to apply category management strategies used in consumer marketing to the foodservice business. Our connection with our suppliers happens not just at the point of purchase, but at many touch points across the spectrum of our business. We are constantly assessing how we can be more integrated with our largest suppliers at each of those multiple touchpoints.

### Size and Configuration

Traditional rounds for plates are sized at 6" and 7" diameter for use with sides and salads. Strength and cut resistance are typically less of a concern in the small sizes. Primary segments for the 6" size include hospitals, followed by senior living, business and industry, and colleges and universities. Primary segments for the 7" size plate are catering and banquet, followed closely by colleges and universities, then lodging.

Larger plates and platters (sizes 9" to 12") are designed for entrée and full-portion meals, with compartment options. Five compartment 8x10" trays dominate the category and are used almost exclusively by the primary and secondary education segment. In the general trade, 9" rounds outsell the 10" by a factor of 3:1. At the 9" size, one compartment plates outsell three compartment plates (9:1). Primary users at the 9" size are hospitals, lodging, and business and industry. Three compartment plates dominate 10" round sales by 40%. The compartment option addresses operator demand for portioning and presentation, while adding strength. Primary segments for the 10" rounds include catering and banquet, casual dining, followed by family dining, recreation, and lodging.

Four to eight ounce bowls are commonly selected for sides. Hospitals represent 52% of sales followed by primary and secondary education at 13%, and senior living facilities at 11%. Twelve to 30 ounce bowls are commonly used for cereal, salads, soups, stews, or noodle and rice entrees, and used by lodging (23%), hospitals (16%), and business and industry (11%). Food trays are popular in casual dining settings and offered in a range of sizes. An economical alternative, they are widely used in cafeterias, food stands, food trucks, recreation venues, quick serve and limited service operations.

### Strength and Cut Resistance

Strength in tableware is a measure of the ability to withstand deflection and, in extreme cases, fold-over when being plated. Resistance to cutting or plate puncture can be increased by lamination, or by a special coating applied to foam and paper base materials.

### Soak Resistance and Lid Seal

Soak resistance is a measure of how well, and for how long, tableware will resist grease and moisture from food. Lid seal is how tightly mated a lid is to a base. Base strength and rim design contributes to seal integrity, especially as it affects plated food in transit.

### Heat Tolerance and Insulation

Heat tolerance is the temperature, ranging from blast freezer to ovenable, at which the piece is able to maintain integrity. Heat tolerances are driven by the material makeup of each piece and affected by food temperature at the point of plating. Insulation is a measure of how well heat transfers through each piece; a primary concern when food items must be transported by hand for any length of time.

## CUTLERY

### Break Resistance

Break resistance is a measure of an item's ability to bend before breaking. Bendability is affected by item weight and base material composition. Cutlery made of polypropylene is highly flexible and preferred in educational and correctional settings where safety is a priority.

### Color

Various color options allow for visual preferences, décor, and coordination with other elements of table service.

### Heat Tolerance

Heat Tolerance is the ability to withstand heat as affected by the material makeup of a piece. In settings where cutlery will be subjected to temperatures exceeding 180 °F, polypropylene based pieces should be selected.

### Length

Mid-length utensils are appropriate for dining situations of lesser demand. In circumstances where a consumer needs to cut food, or in order to create a formal dining experience, operators should opt for full-length cutlery.

### Packaging

Oriented bulk pack refers to nesting individual pieces to reduce storage space requirements, while improving efficiency and sanitation concerns associated with dispensing cutlery. Cutlery is offered as individually wrapped, or boxed in smaller dispensing boxes, within master cartons, for use in stocking satellite locations (i.e. kiosks, wait stations, and catering). Cutlery or specialty kits are assembled with more than one cutlery component for controlled, sanitary delivery to the user. Various pre-packaged stock options are available.

### Sustainable Considerations

Source reduction is achieved by minimizing material waste. Factors for consideration include compliance legislation, local recycling efforts, compostable material for disposal, and whether the item can be made from renewable resources.

### Weight

Individual weight is a proxy for strength in use, as well as for overall consumer experience. A heavier piece will better approximate both the hand feel and performance of permanentware in cutting, poking, and lifting tasks.

### Clay Coated Paperboard

Paper which has been coated by a compound or polymer to impart certain qualities, including grease resistance and protection against moisture. This process gives Sysco food trays a desirable weight, surface gloss, and smoothness.

### EarthChoice® Compostable Polylactic Acid (CPLA) Cutlery

Our cutlery begins and ends with mother nature. Derived from plant sugars, a 100% renewable resource, we form a product that boasts high tensile strength and extraordinary temperature resistance of up to 180 °F. CPLA is fully compostable in municipal and industrial compost facilities. It begins responsibly, performs flawlessly, and disposes naturally.

### EarthChoice® Molded Fiber Plates

Sysco Molded Fiber is naturally sustainable, made in the USA from domestic fiber (a renewable resource), and compostable.

### EarthChoice® PLAstarch Material (PSM) Cutlery

We begin with a responsible approach to create greater utility. PSM is a starch based material made from corn, an annually renewable resource. The starch is modified, blending with several other materials, to create an elevated heat threshold. It's a natural for higher heat applications handling temperatures of up to 200 °F.

### High Impact Polystyrene (HIPS)

HIPS is a rigid version of foam polystyrene. An additive is used to allow the material to be less brittle but still maintain good stiffness properties. HIPS products are offered in opaque colors such as black and white.

### Oriented Polystyrene (OPS) Domes

Sysco dome lids are made from ultra clear OPS plastic and offer secure protection for nearly every plate size, while enhancing food appearance and presentation. An easy-open tab release facilitates dome removal.

**Polyethylene terephthalate:** Thermoformed sheet, strapping, soft drink bottles, tote bags, furniture, carpet, paneling and (occasionally) new containers

**High-density polyethylene:** Bottles, grocery bags, milk jugs, recycling bins, agricultural pipe, and base cups

**Low-density polyethylene:** Plastic bags, 6 pack rings, various containers, dispensing bottles, wash bottles, tubing, and various molded laboratory equipment

**Polypropylene:** Auto parts, industrial fibers, food, containers, and dishware

**Polystyrene:** Desk accessories, cafeteria trays, plastic utensils, toys, video cassettes and cases, clamshell containers, and packaging peanuts

**Other or O:** Other plastics, such as acrylic, nylon, polycarbonate, and polylactic acid (a bioplastic); bottles, plastic lumber, and safety shields/glasses

**Sustainable:** Development that meets the needs of the present without compromising the ability of future generations to meet their own needs

**Renewable:** A natural resource that is replenished by natural processes at a rate comparable to its rate of consumption

## Sysco Fieldware®

Sysco Fieldware® foam line is a cost effective everyday option. Fieldware® offers a non-absorbent and cut resistant satin finish. Available in classic neutrals, these plates and bowls will enhance any table setting. Add clear plastic domes to make carry-out safe and easy.

### Product Features

#### Everyday practical

Cut, bend and break resistant  
Non-absorbent surface keeps liquids from soaking through

#### Versatile and attractive

Scalloped rim design  
Offered in a full range of sizes  
Available in white and vanilla with a smooth satin finish

#### Unique benefits

A cost-effective option for everyday  
Clear covers provide food protection for merchandising or carry-out applications

#### Polystyrene (PS) Foam TEMPERATURE RANGE CHART

## Fieldware® Impact®

Sysco's Fieldware® Impact® line offers the benefits of high impact polystyrene at an economical price. Our unique de-nesting feature allows for easy piece separation, and uses 40% less cube space than comparable foam items. Smooth, rigid plastic offers a sturdy, yet lightweight, construction with a china-like luster. Optimum performance for most foodservice applications.

### Product Features

#### Smooth, rigid plastic

Rigid, high impact polystyrene construction  
Superior cut resistance

#### Versatile and attractive

Offered in a full range of sizes with a china-like finish

#### Unique benefits

Unique de-nesting feature allows for easy piece separation

Uses 40% less cube space than comparable foam items

#### High Impact Polystyrene (HIPS) TEMPERATURE RANGE CHART

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

## Sysco Imperial® Clear Impact®

Injection molded plates mix understated elegance with practicality. Sturdy to withstand heavy food portions, and durable to resist sharp utensil usage. Available in 6.3" for appetizers and desserts, and 9" and 10.3" for lunch and dinner, clear plates allow entrées to take center stage. Decorative, impressive and well suited to any occasion.

### Product Features

#### Elegant and practical

Durable and cut resistant  
Clear, classic design

#### Versatile and attractive

Offered in popular dining sizes  
Suitable for any occasion

#### Unique benefits

Injection molded plates offer strength and durability

#### High Impact Polystyrene (HIPS) TEMPERATURE RANGE CHART

## Waveware™

Multipurpose plates and plate-dome combination are a perfect fit for any dine-in or dine-out application. Customers can conveniently reheat uneaten portions. The double sealing edge keeps liquids in while allowing steam to escape. Strong, stackable domes for reliable transport, plates and lids are manufactured from durable polypropylene and can be deposited into the established municipal collection stream.

### Product Features

#### Convenient and practical

Suitable for transport, dine-in, dine-out and customer reheating

#### Versatile and attractive

Ideal for a wide range of restaurant and catering applications

#### Unique benefits

Microwaveable, double sealing edge keeps liquids in while allowing steam to escape  
 Durable clear lids protect without concealing contents  
 Stack domes with confidence

#### Recyclable

Polypropylene material can be deposited into established municipal collection stream

#### Polypropylene (PP) Heavyweight TEMPERATURE RANGE CHART

## Platters and Trays

Our sturdy trays are available in several sizes and colors, perfect for presentation and dining. Compartment school lunch trays offer convenient portion control, and their durable construction withstands rugged handling. Trays are attractive, lightweight and eliminate dishwashing and expensive permanentware replacement.

## Product Features

### Improved Design

- Holds larger portions
- Facilitates one handed service

### Disposable

- Eliminates dishwashing and expensive permanentware replacement

### Non-laminated satin

- Perfect for fast food, cafeteria and employee dining

Foam Carry Trays Polystyrene (PS)  
TEMPERATURE RANGE CHART

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

## Paper Food Trays

An industry staple, our paper food trays are made of strong, clay coated paperboard, moisture and grease resistant, available in a variety of sizes, and offered in appealing prints. Ideal for any casual dining setting.

### Product Features

#### Conveniently packed

Tightly nested sleeves minimize space utilization, weight and cube

Each stack is film bag packed for sanitary handling

#### Made with SBS (Solid Bleached Sulfite Paperboard)

Clay-coated surface protects against grease

#### Rigid

Strength to support up to 5 LBS

#### Versatile

Gives perfect fit for a variety of foodservice applications

#### Sustainable

Made from renewable paper

## EarthChoice® Cutlery

Our cutlery is offered in a range of colors, strengths, heat tolerances, lengths and weights to suit a range of applications. We offer individually wrapped, dispensing boxes, and master carton packed options. Specialty kits are component assembled for controlled, sanitary delivery to the user. Various pre-packaged stock options are also available.

### Product Features

#### CPLA

##### 100% Renewable Resource

Made with Ingeo™ Compostable and made from renewable resources

##### Strong

Can perform at higher temperatures; Break resistant.

#### PSM

##### Manufactured from plants and modified with starch

Annually renewable materials made from plants

##### PSM (Plastarch Material)

PSM is manufactured from starch and a blend of several other materials. The base material comes from a starch that is modified in order to obtain heat resistant properties. Since PSM is derived from corn, an annually renewable resource, this material can handle temperatures up to 200 °F making it perfect for higher heat applications

##### Recyclable #5 Polypropylene

##### Sturdy

Enables ease of use when cutting food

EarthChoice® Compostable Polylactic Acid (CPLA)  
TEMPERATURE RANGE CHART

EarthChoice® Plastarch Material (PSM)  
TEMPERATURE RANGE CHART

CPLA is fully compostable in municipal and industrial compost facilities where available. ASTM D 6868 certified and compostable in commercial facilities only, which may not exist in all areas. Not suitable for backyard composting. For a complete list of compost facilities near you visit [findacomposter.com](http://findacomposter.com). PSM is not compostable.

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

**Junior Kits** Available in:

- Regular
- Low Sodium
- Sugar Free/Low Sodium
- Bland
- Sugar Free
- Bulk Count of 1000

**Pouch Kits** Each kit contains:

- Flex Straw and 2-ply 13" x 17" napkin
- Wide variety of combinations
- Bulk count of 500

**Non Pouch Kits** Each kit contains:

- Flex Straw and 1-ply 13" x 17" napkin
- Wide variety of combinations
- Bulk count of 500 or 5/100 dispenser box
